Lecture Outlines

This section contains outlines and overviews for each lecture, organized chronologically. Use these to review key concepts covered in class or to prepare for upcoming sessions.

How to Use These Outlines

Each lecture outline provides:

- **Key concepts** covered in that session
- **Code examples** demonstrated in class
- **Timestamps** linking to specific points in the recording

These are meant to supplement – not replace – attending lecture and doing the readings.

Adding Lectures

Use the `/lecture` command in Claude Code to process a Panopto transcript into a structured outline. The command will:

1. Ask for the recording link and transcript
 2. Process the transcript into clean, structured sections
 3. Create the markdown file and update the navigation
 4. Commit, push, and create a PR
-

This guide is part of [COURSE]. Replace this footer after customizing CLAUDE.md.
